

Datasheet

NetApp AltaVault Cloud-Integrated Storage (formerly SteelStore)

Virtual appliances for Microsoft Hyper-V
and VMware vSphere

Key Features

Efficient

Accelerates data protection by reducing data volumes by up to 90%

Open

Integrates with the backup software you already use and with all leading public and private cloud storage providers

Secure

Keeps data encrypted at all times, reducing security and compliance risks in the cloud

Simple

Enables you to go from zero to cloud protected in less than 30 minutes

The Challenge

Backup and restore processes are slow, expensive, and risky

Traditional backup and recovery solutions fall short because they are:

- **Too slow.** Users expect instant recovery and minimal data loss, but legacy backup and recovery strategies can't keep pace. As a result, many organizations fail to meet backup and recovery windows.
- **Too expensive.** As storage grows, companies struggle with the rising cost of protecting that data on the premises. Additionally, bandwidth costs and constraints become more acute with larger datasets.
- **Too risky.** Many organizations still rely on tape, which increases risk exposure because of the potential for lost media in transport, increased downtime and data loss, and limited testing ability.

The Solution

Send and archive data to the public or private cloud

NetApp® AltaVault® storage enables customers to securely back up data to any cloud at up to 90% less cost compared to on-premises solutions. AltaVault gives customers the power to tap into cloud economics while preserving investments in existing backup infrastructure and meeting backup and recovery SLAs.

AltaVault virtual appliances for Microsoft Hyper-V and VMware vSphere

AltaVault virtual appliances are an ideal solution for medium-sized businesses that want to get started with cloud backup. They're also ideal for enterprises that want to protect branch offices and remote offices with the same level of protection they enjoy in the data center. AltaVault virtual appliances provide the flexibility of deploying onto heterogeneous hardware while still providing all of the features and functionality of hardware-based appliances. AltaVault virtual appliances can be deployed onto VMware vSphere or Microsoft Hyper-V hypervisors, enabling customers to choose the hardware that works best for them.

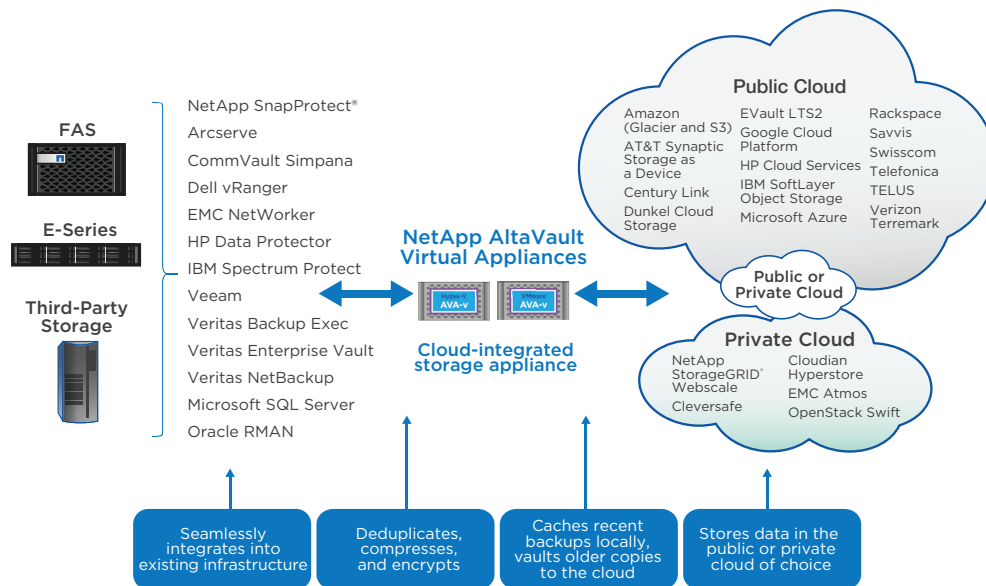

Figure 1) NetApp AltaVault provides seamless integrations with existing applications and cloud service providers.

Category	Attributes ¹	VIRTUAL APPLIANCES					
		Backup Mode			Cold Storage Mode		
		AVA-v8	AVA-v16	AVA-v32	AVA-v8	AVA-v16	AVA-v32
Performance	Backup Throughput (Maximum)	900GB/hr	1.8TB/hr	2.6TB/hr	350GB/hr	350GB/hr	350GB/hr
Cloud	Cloud Storage Providers Supported ¹	Multiple; visit the solution connection ⁴ for more details					
	Cloud Capacity Supported ²	40TB	80TB	160TB	N/A	N/A	N/A
	Logical Cloud Capacity (Maximum) ³	1.2PB	2.4PB	4.8PB	2.5PB	5PB	10PB
Local Disk Storage	Usable Local Capacity (Maximum)	8TB	16TB	32TB	8TB	16TB	32TB
	RAID Protection	RAID 6 recommended for datastore storage					
Network	Storage Networking Supported	CIFS/SMB, NFS					
Server	Supported Hypervisors	vSphere ESXi, Hyper-V					
Third-Party Application	Backup/Archive Software Supported	Multiple; visit the solution connection ⁴ for more details					

1. For details on technical specifications, contact your nearest NetApp or channel sales associate.
2. 5x of appliance usable local capacity; for example, a maximum of 160TB of cloud capacity can be supported by 32TB of usable local capacity.
3. Backup mode: calculated using 30x deduplication.
